

Muhammad Humayun — Career Knowledge Base for Personal AI Chatbot

1. Personal Identity

Name: Muhammad Humayun

Professional Name: M Humayun / Muhammad Humayun

Email: humayunmhk3@gmail.com

Phone: +92-3140818147

LinkedIn: <https://www.linkedin.com/in/humayun-mhk-927407251/>

GitHub: <https://github.com/humayun-mhk>

Portfolio: <https://mhumayun-ai-engineer.vercel.app/>

Location: Pakistan

Career Direction: AI/ML Engineer, AI Engineer Intern, Generative AI Engineer, Backend AI Engineer, Python Developer, AI Automation Engineer, RAG/LLM Engineer

2. Current Professional Positioning

Muhammad Humayun is an AI/ML Engineer and BS Computer Science student focused on building real-world AI systems, Agentic AI applications, RAG pipelines, backend AI APIs, machine learning pipelines, NLP systems, computer vision applications, and scalable AI-powered products.

Preferred LinkedIn headline:

AI/ML Engineer | Building Agentic AI & Scalable Backend Systems | FastAPI | RAG | MLOps, LLMOps & AWS

Alternative headline:

AI/ML Engineer | Building Agentic AI & Scalable Backend Systems | FastAPI | NLP & Computer Vision | MLOps, LLMOps & AWS

Professional identity:

Muhammad Humayun is not only focused on model training. He focuses on building complete AI systems that connect machine learning, LLMs, backend APIs, databases, deployment, automation, and real-world product workflows.

3. Education

University: University of Engineering & Technology Mardan

Degree: Bachelor of Science in Computer Science

Duration: Nov 2023 – Aug 2027

Location: Mardan, Pakistan

Relevant Coursework:

- Artificial Intelligence
- Machine Learning
- Deep Learning
- Natural Language Processing
- Computer Vision
- Generative AI
- Database Systems
- Data Structures
- Software Engineering
- Web Development
- Data Analysis

Academic Status: Currently pursuing BS Computer Science.

4. Career Goal

Muhammad Humayun's goal is to become a strong AI Engineer who can build production-ready AI systems, not just notebook-based models.

Main career targets:

- AI/ML Engineer
- AI Engineer Intern
- Generative AI Engineer
- Junior AI Engineer
- Backend AI Engineer
- Python Backend Developer
- AI Automation Engineer
- RAG Engineer
- LLM Engineer
- NLP Engineer
- Computer Vision Engineer
- MLOps / LLMOps Engineer

Preferred roles:

- Remote AI/ML internships
- Generative AI internships
- AI Engineer internships
- Python backend roles with AI integration
- Agentic AI and RAG-based roles

- AI automation and n8n workflow roles
 - Junior AI Engineer roles
-

5. Professional Summary

Muhammad Humayun is an Artificial Intelligence and Machine Learning student with hands-on experience building AI/ML models, Generative AI applications, LLM-powered systems, RAG pipelines, AI agents, NLP workflows, computer vision systems, backend AI APIs, and deployment-ready AI products.

He is skilled in Python, FastAPI, Flask, Scikit-learn, PyTorch, TensorFlow, Hugging Face, OpenAI API, Claude, Gemini, LangChain, LangGraph, LlamaIndex, FAISS, ChromaDB, Pinecone, PostgreSQL, MongoDB, SQLite, MySQL, Docker, GitHub Actions, AWS, Git, and GitHub.

He has practical experience in data preprocessing, feature engineering, model training, model evaluation, prompt engineering, retrieval-based systems, vector databases, AI agent workflows, API integrations, backend development, database-backed applications, and production-style deployment.

6. Core Technical Skills

Programming

- Python
- JavaScript
- SQL

Backend Development

- FastAPI
- Flask
- REST APIs
- API Development
- API Integrations
- Webhooks
- Swagger Documentation
- Backend Service Design
- Real-Time Inference APIs
- File Upload APIs
- Authentication-style workflows
- Role-based workflow design

Artificial Intelligence & Machine Learning

- Machine Learning
- Deep Learning
- Supervised Learning

- Classification
- Regression
- Feature Engineering
- Model Training
- Model Evaluation
- Error Analysis
- Batch Prediction
- Real-Time Prediction
- Experiment Tracking

Data Analysis & Preprocessing

- Pandas
- NumPy
- Data Cleaning
- Data Preprocessing
- Feature Engineering
- Exploratory Data Analysis
- Data Validation
- Data Transformation
- Model-ready dataset preparation

Generative AI & LLMs

- Generative AI
- Large Language Models
- OpenAI API
- Claude
- Gemini
- DeepSeek
- AWS Bedrock
- Hugging Face
- LangChain
- LangGraph
- LlamaIndex
- Prompt Engineering
- System Prompt Design
- Few-Shot Prompting
- Structured Outputs
- Tool Calling
- Function Calling
- LLM Evaluation
- Hallucination Reduction
- Response Quality Testing

RAG & Vector Databases

- RAG Pipelines

- Agentic RAG
- FAISS
- Pinecone
- ChromaDB
- pgvector
- Embeddings
- Semantic Search
- Context Generation
- Retrieval Workflows
- Grounded AI Responses
- Document Question Answering

AI Agents & Workflow Automation

- AI Agents
- Agentic Workflows
- Multi-Agent Systems
- LangGraph Agents
- n8n
- Workflow Automation
- Backend AI Workflows
- API-Based AI Services
- CRM Automation
- Email Automation

NLP & Transformers

- NLP
- Transformers
- Text Classification
- Semantic Search
- Topic Modeling
- Text Preprocessing
- Tokenization
- Pre-trained Language Models
- Fine-Tuning Concepts
- Hugging Face Transformers

Computer Vision

- OpenCV
- YOLOv8
- MTCNN
- FaceNet
- EfficientNet
- CNNs
- Transfer Learning
- Object Detection

- Image Classification
- Face Recognition
- Image Processing
- Multimodal AI

Databases

- PostgreSQL
- MongoDB
- SQLite
- MySQL
- Firestore
- SQL Databases
- NoSQL Databases
- Database Design
- CRUD Workflows
- Data Storage

Cloud, DevOps & Deployment

- AWS Basics
- AWS SageMaker
- AWS Bedrock
- AWS S3
- AWS ECR
- AWS ECS
- AWS CloudFront
- Docker
- GitHub Actions
- CI/CD
- Render
- MLflow
- Git
- GitHub
- Linux

Tools

- VS Code
- Jupyter Notebook
- Google Colab
- Kaggle
- Git
- GitHub
- Docker
- Render
- AWS Console

Soft Skills

- Problem Solving
 - Fast Learning
 - Communication
 - Team Collaboration
 - Documentation
 - Adaptability
 - Eagerness to Learn
 - Continuous Learning
 - Growth Mindset
-

7. Internship Experience

AI/ML Intern — InternPe

Remote | Jan 2026 – Apr 2026

Responsibilities and experience:

- Built machine learning, deep learning, NLP, and Generative AI applications using Python, Scikit-learn, PyTorch, TensorFlow, and FastAPI.
- Developed AI/ML workflows involving data preprocessing, feature engineering, model training, model evaluation, and deployment-ready inference APIs.
- Built RAG pipelines using LLMs, embeddings, vector databases, and retrieval-based context generation.
- Created FastAPI-based backend services to integrate AI/ML models with modern applications and business workflows.
- Improved model and LLM response quality through evaluation metrics, prompt testing, error analysis, and iterative experimentation.
- Worked with API-based AI services and backend AI workflows.

Generative AI Intern — Arch Technologies

Remote | Oct 2025 – Dec 2025

Responsibilities and experience:

- Built Generative AI applications including chatbots, RAG systems, multimodal workflows, and automation tools.
- Integrated LLMs with vector databases, REST APIs, backend services, and workflow automation systems.
- Developed AI agents and retrieval workflows for business automation and intelligent user interaction.
- Worked on prompt engineering, tool-based workflows, API integrations, and context-aware response generation.

- Built practical AI automation workflows using modern Generative AI tools.

NLP Intern — Elevvo Pathways

Remote | Sep 2025 – Oct 2025

Responsibilities and experience:

- Built NLP solutions for text classification, semantic search, topic modeling, and language understanding tasks.
 - Used Hugging Face Transformers and pre-trained language models for text classification, semantic search, and NLP experimentation.
 - Implemented preprocessing, feature extraction, model training, model evaluation, and text-based AI workflows.
 - Worked with transformers, fine-tuning concepts, and language model-based NLP tasks.
-

8. Main Projects

1. CareerPilot AI — Multi-Agent Career Assistant

Type: Full-stack Agentic AI / Career Assistant

Tech Stack: React, FastAPI, LangGraph, PostgreSQL or SQLite, ChromaDB, OpenAI, Render

Description: CareerPilot AI is a full-stack multi-agent career assistant that analyzes resumes, LinkedIn profiles, GitHub evidence, portfolio context, and job descriptions to generate evidence-aware career recommendations.

Main features:

- Resume analysis
- LinkedIn optimization
- Job description analysis
- Job match scoring
- Skill gap analysis
- GitHub evidence scanning
- Resume tailoring
- Cover letter generation
- Project recommendations
- Application tracking
- Resume versioning
- Evaluation reports
- Agent tracing
- Human approval before saving outputs

Engineering value: This project shows practical AI engineering skills, including multi-agent orchestration, RAG memory, evidence verification, API development, backend workflows, database design, and human-in-the-loop AI.

Why it matters: It proves Muhammad Humayun can build more than a simple chatbot. He can build a complete AI product with backend APIs, frontend UI, agent workflows, database storage, and deployment.

2. Multimodal Vision RAG

Type: Multimodal RAG / Vision + Document AI

Tech Stack: GPT-4o Vision, FAISS, FastAPI, React

Description: Multimodal Vision RAG is a platform that allows users to query PDFs, images, and text documents through a ChatGPT-style interface.

Main features:

- PDF, image, and text document querying
- Multimodal input support
- Document ingestion
- Embeddings
- Semantic search
- Retrieval pipelines
- Context generation
- LLM response generation
- Backend APIs connecting frontend chat with retrieval workflows

Engineering value: This project shows experience with RAG systems, vector search, FastAPI backend development, frontend integration, and multimodal AI.

Why it matters: It is one of the strongest projects for Generative AI, RAG, LLM, LangChain-style, Hugging Face-style, and AI Engineer internship roles.

3. End-to-End Network Security ML Project

Type: Production-style Machine Learning Pipeline

Tech Stack: Python, Scikit-learn, FastAPI, MongoDB, Docker, AWS, MLflow, GitHub Actions

Description: This project is a machine learning pipeline for phishing and malicious website detection.

Main features:

- Data ingestion
- Data validation

- Data transformation
- Feature engineering
- Model training
- Model evaluation
- Batch prediction
- Real-time prediction APIs
- File upload support
- Swagger documentation
- Structured logging
- Custom exception handling
- Model artifact management
- MLflow experiment tracking
- AWS S3 integration
- Docker containerization
- CI/CD deployment using GitHub Actions, AWS ECR, and AWS ECS

Dataset: Trained supervised ML models including Random Forest and Gradient Boosting on 11,000+ labeled URL samples with 31 engineered security features.

Engineering value: This project proves Muhammad Humayun can build ML systems beyond notebooks, including backend APIs, MLOps practices, deployment, and real-time inference.

Why it matters: This is one of his strongest projects for ML Engineer, AI Engineer, Python Backend Developer, and MLOps-focused roles.

4. AI Healthcare Appointment & Safe Triage Platform

Type: Full-stack AI Healthcare Platform

Tech Stack: React, FastAPI, PostgreSQL, pgvector, AI triage workflows

Description: This is a production-style healthcare appointment and safe triage platform. It supports safe symptom intake, urgency detection, specialty routing, doctor matching, and appointment booking.

Main features:

- Patient registration
- Login flow
- Symptom intake
- Urgency detection
- Specialty routing
- Doctor matching
- Appointment booking
- Admin dashboard
- Doctor dashboard
- Human review queue
- Notifications

- Analytics
- Audit logs
- RAG-based policy guidance
- Rule-based red flag detection
- Medical safety guardrails

Safety design: The system avoids diagnosis or treatment advice and focuses on safe routing, review, and appointment support.

Engineering value: This project proves backend AI engineering, database design, healthcare workflow modeling, RAG guidance, safe AI design, and full-stack product thinking.

5. AI Restaurant Support & Voice Automation Workflow

Type: AI Automation / Voice + RAG Workflow

Tech Stack: n8n, OpenAI, Pinecone, ElevenLabs, Google Drive API

Description: This is an AI-powered restaurant support automation workflow that combines vector search, conversational AI, workflow automation, and voice AI.

Main features:

- Restaurant data retrieval from Google Drive
- Embedding generation
- Menu/customer data storage in Pinecone
- Intelligent search
- OpenAI chat model integration
- ElevenLabs voice synthesis
- Customer query handling
- Booking support
- Order confirmation support
- Human escalation workflows

Engineering value: This project shows practical AI automation, n8n workflow building, RAG search, voice integration, and business process automation.

Why it matters: Strong for AI Automation Engineer, n8n Engineer, Voice Agent, AI Agent, and Generative AI workflow roles.

6. Real-Time Face Recognition System

Type: Computer Vision / Real-Time Recognition System

Tech Stack: YOLOv8, MTCNN, FaceNet, OpenCV, Flask, SQLite

Description: A real-time face recognition system for identity detection and monitoring.

Main features:

- Live identity detection
- Face embedding generation
- Face recognition workflow
- Dashboard-based monitoring
- Real-time image/video processing
- SQLite record storage
- Flask-based backend workflows

Engineering value: This project shows computer vision, real-time inference, backend integration, and practical AI monitoring workflows.

Best for: Computer Vision Engineer, AI Engineer, ML Engineer, and backend-integrated AI roles.

7. Eye Disease Classification using EfficientNetB3

Type: Medical Computer Vision / Deep Learning

Tech Stack: EfficientNetB3, TensorFlow, Transfer Learning

Description: A retinal image classification model that classifies multiple eye disease categories from medical images.

Main features:

- Transfer learning
- Image preprocessing
- Normalization
- Data augmentation
- Model training
- Model evaluation
- Prediction analysis

Engineering value: This project shows deep learning, medical image classification, TensorFlow, and transfer learning experience.

Best for: Deep Learning, Computer Vision, Healthcare AI, and ML internship roles.

8. AWS SageMaker End-to-End ML Pipeline

Type: Cloud ML / MLOps Pipeline

Tech Stack: AWS SageMaker, Python, ML pipeline tools

Description: An end-to-end ML pipeline built and deployed on AWS SageMaker for mobile phone price classification.

Main features:

- Preprocessing
- Model training
- Model evaluation
- Endpoint deployment
- Real-time inference
- Model lifecycle handling
- Scalable inference workflow

Engineering value: This project shows exposure to cloud ML deployment and production-style ML workflows.

Best for: MLOps, Cloud AI, AWS, and ML Engineer roles.

9. Employee Management System

Type: Backend / Web CRUD Application

Tech Stack: PHP, MySQL, HTML, CSS, JavaScript, XAMPP

Description: A web-based employee management system with admin-style workflows.

Main features:

- Add employee
- Edit employee
- Delete employee
- View employee records
- MySQL database connectivity
- File uploads
- Responsive pages
- Structured employee data management

Engineering value: This project supports Python/backend/full-stack applications because it proves CRUD, database, and web application fundamentals.

10. Campus Marketplace

Type: Mobile App / Marketplace System

Tech Stack: Flutter, Firebase Authentication, Firestore, Firebase Storage

Description: A campus buy-and-sell mobile app that allows students to post, browse, search, and manage marketplace listings.

Main features:

- Student listings
- Search
- User profiles
- Firebase Authentication
- Firestore database
- Image uploads
- Firebase Storage
- Phone/WhatsApp contact integration
- Real-time Firestore streams
- Reusable widgets
- Service-layer structure

Engineering value: Shows mobile development, Firebase backend, real-time data, and product workflow thinking.

11. PublicPulse AI

Type: Civic AI / Accountability Prototype

Tech Stack: Flutter or React, FastAPI, Gemini Vision or GPT Vision, LLMs, LangGraph or CrewAI, SQLite or PostgreSQL, FAISS or ChromaDB, pandas, pdfplumber, OCR tools

Description: PublicPulse AI is an AI-powered civic accountability prototype for reporting public infrastructure issues such as damaged roads.

Main features:

- Upload infrastructure issue photos
- Computer vision-based issue detection
- NLP-based report generation
- Open-data matching
- Accountability scoring
- RTI request generation
- Department matching
- Project matching
- Report generation

Prototype endpoints:

- POST /analyze-image
- /match-project
- /generate-rti
- /generate-report

Example demo: A damaged road in Mardan is analyzed. The system identifies issue type, department, missing fields, accountability score, and generates an RTI-style request.

Engineering value: This is a strong future civic-tech AI project showing computer vision, NLP, open-data retrieval, accountability scoring, and AI report generation.

12. Smart Retail Monitoring

Type: Computer Vision / Retail Behavior Detection System

Description: Smart Retail Monitoring is a future project idea focused on using CCTV/computer vision to classify customer behavior into Normal, Suspicious, and Shoplifting risk categories.

Main features:

- CCTV-based behavior monitoring
- Customer behavior classification
- Suspicious activity detection
- Shoplifting risk indicators
- Real-time monitoring dashboard
- Actionable store insights
- Human review before decisions

Important positioning: This should not be marketed as “AI catches thieves.” It should be positioned as a retail safety and behavior monitoring system that supports human decision-making.

Engineering value: Strong for computer vision, surveillance AI, real-time inference, and responsible AI roles.

9. Best Resume Positioning by Job Type

For AI Engineer / AI Intern roles

Best title: Artificial Intelligence Intern | Python | Machine Learning | Generative AI | LLMs

Best project order: 1. CareerPilot AI 2. Multimodal Vision RAG 3. End-to-End Network Security ML Project 4. AI Healthcare Appointment & Safe Triage Platform 5. AI Restaurant Support & Voice Automation Workflow

Best focus:

- Python
- AI/ML models
- Generative AI
- LLMs
- RAG
- AI agents
- Data preprocessing
- Model evaluation

- FastAPI
 - Real-world AI product development
-

For Generative AI / LLM Intern roles

Best title: Generative AI/ML Intern | Python | LLMs | RAG | LangChain | Hugging Face

Best project order: 1. Multimodal Vision RAG 2. CareerPilot AI 3. AI Restaurant Support & Voice Automation Workflow 4. AI Healthcare Appointment & Safe Triage Platform 5. End-to-End Network Security ML Project

Best focus:

- LLMs
 - RAG
 - LangChain
 - Hugging Face
 - Prompt Engineering
 - Vector Databases
 - AI Agents
 - Structured Outputs
 - FastAPI
 - Retrieval workflows
-

For Python Developer / Backend Developer roles

Best title: Python Developer | FastAPI | Flask | REST APIs | SQL & Databases

Best project order: 1. End-to-End Network Security ML Project 2. CareerPilot AI 3. AI Healthcare Appointment & Safe Triage Platform 4. Multimodal Vision RAG 5. Real-Time Face Recognition System

Best focus:

- Python
- FastAPI
- Flask
- REST APIs
- SQL
- PostgreSQL
- MongoDB
- SQLite
- Docker
- GitHub Actions
- Swagger documentation
- CRUD workflows

- Backend API development

Do not claim strong Django unless actually comfortable building Django applications.

For AI Automation / n8n Engineer roles

Best title: AI Automation Engineer | n8n Workflow Specialist | LLM & RAG Systems

Best project order: 1. AI Restaurant Support & Voice Automation Workflow 2. CareerPilot AI 3. Multimodal Vision RAG 4. AI Healthcare Appointment & Safe Triage Platform 5. AI Resume Screening / Career automation workflows

Best focus:

- n8n
 - OpenAI
 - Pinecone
 - ElevenLabs
 - Google Drive API
 - Webhooks
 - Workflow automation
 - AI agents
 - RAG
 - Voice automation
 - CRM/email automation
-

For Machine Learning Engineer roles

Best title: Machine Learning Engineer | Python | PyTorch | TensorFlow | Computer Vision | MLOps

Best project order: 1. End-to-End Network Security ML Project 2. AWS SageMaker End-to-End ML Pipeline 3. Real-Time Face Recognition System 4. Eye Disease Classification using EfficientNetB3 5. Multimodal Vision RAG 6. CareerPilot AI

Best focus:

- Scikit-learn
- PyTorch
- TensorFlow
- ML pipelines
- Data preprocessing
- Feature engineering
- Model training
- Model evaluation
- MLflow

- Docker
 - AWS
 - FastAPI inference APIs
 - MLOps
-

10. Certifications

- Machine Learning Specialization — Stanford University / DeepLearning.AI
 - MLOps Specialization — Udemy
 - Generative AI Certification — Udemy
-

11. Portfolio Positioning

Portfolio URL: <https://mhumayun-ai-engineer.vercel.app/>

Portfolio should highlight:

- CareerPilot AI
- Multimodal Vision RAG
- End-to-End Network Security ML Project
- AI Healthcare Appointment & Safe Triage Platform
- AI Restaurant Support & Voice Automation Workflow
- Real-Time Face Recognition System
- AWS SageMaker ML Pipeline

Best portfolio tagline: AI/ML Engineer building Agentic AI, RAG systems, backend AI APIs, and scalable real-world AI products.

12. GitHub Positioning

GitHub: <https://github.com/humayun-mhk>

GitHub should show:

- Clean README files
- Architecture diagrams
- Tech stack badges
- Setup instructions
- Screenshots
- Demo links
- API documentation
- Environment variable examples
- Deployment notes

- Clear project purpose
- “What I learned” section
- “Future improvements” section

Strong GitHub proof is very important because recruiters may not deeply read the resume. They often check whether projects are real and understandable.

13. Application Strategy

Best jobs to apply for:

- AI/ML Intern
- Artificial Intelligence Intern
- Generative AI Intern
- LLM Intern
- RAG Intern
- Python Backend Intern
- AI Automation Intern
- Junior AI Engineer
- Junior ML Engineer
- FastAPI Backend Developer
- AI Agent Developer
- NLP Intern
- Computer Vision Intern

Jobs to be careful with:

- Senior AI Engineer
 - Senior ML Engineer
 - Roles requiring 3–5 years of experience
 - Roles requiring strong Django if Django is not practiced
 - Onsite roles outside Pakistan unless relocation is possible
 - Roles requiring legal work authorization in another country
 - Unpaid internships unless the learning value is strong
-

14. Strong Application Message Template

Muhammad Humayun is currently pursuing a BS in Computer Science and has hands-on experience in Python, Machine Learning, Generative AI, LLMs, RAG pipelines, AI agents, FastAPI, LangChain, vector databases, Docker, and real-world AI project development.

His strongest projects include CareerPilot AI, Multimodal Vision RAG, End-to-End Network Security ML Project, AI Healthcare Appointment & Safe Triage Platform, and AI Restaurant Support & Voice Automation Workflow.

He is especially suitable for roles involving AI engineering, backend AI APIs, RAG systems, LLM applications, AI automation, data preprocessing, model evaluation, and production-style AI workflows.

15. Common Short Bio

Muhammad Humayun is a BS Computer Science student and AI/ML Engineer focused on building practical AI systems using Python, FastAPI, LLMs, RAG, LangChain, vector databases, machine learning, NLP, computer vision, Docker, and AWS. He has built several real-world AI projects including a multi-agent career assistant, multimodal RAG platform, healthcare AI triage system, restaurant voice automation workflow, and production-style ML security pipeline.

16. Strong About Section for Chatbot

Muhammad Humayun is an AI/ML Engineer and Computer Science student at UET Mardan. He focuses on building real-world AI products that combine LLMs, RAG, AI agents, machine learning, backend APIs, databases, and deployment. His work includes full-stack AI platforms, FastAPI-based AI backends, multi-agent systems, vector database retrieval, computer vision systems, and MLOps-style ML pipelines.

He is passionate about Agentic AI, scalable backend AI systems, Generative AI, NLP, Computer Vision, MLOps, LLMOps, and AWS-based deployment. He is actively seeking AI Engineer, Generative AI, AI/ML Intern, Python Backend, and AI Automation opportunities where he can contribute to practical AI product development.

17. Interview Strengths

Strong topics:

- Python
- FastAPI
- REST APIs
- Machine Learning pipeline
- Data preprocessing
- Feature engineering
- Model evaluation
- RAG pipelines
- Vector databases
- Prompt engineering
- LangChain / LangGraph workflows
- AI agents
- Backend AI systems
- Docker
- GitHub Actions

- AWS basics
- Computer vision basics
- NLP workflows
- Deployment-ready AI APIs

Topics to prepare carefully:

- Django, if applying to Django roles
- Advanced LoRA / QLoRA, unless fully practiced
- Advanced Kubernetes, unless practiced
- Deep cloud architecture, unless the role is junior/intern
- Legal work authorization questions for foreign countries

18. Honest Career Positioning

Muhammad Humayun should be positioned as an early-career AI/ML Engineer with strong project-based experience. His strongest advantage is not years of industry experience, but the number and quality of practical AI projects he has built.

Best way to present him:

- Practical builder
- Fast learner
- Strong AI project portfolio
- Good backend + AI integration skills
- Strong understanding of LLMs, RAG, FastAPI, vector databases, and ML pipelines
- Interested in production-style AI systems

Avoid presenting him as:

- Senior AI Engineer
- Expert in every tool
- Expert Django developer unless practiced
- Expert in LoRA/QLoRA unless he has built and can explain it properly
- Fully experienced cloud architect

19. Best One-Line Pitch

Muhammad Humayun is an AI/ML Engineer building Agentic AI, RAG systems, FastAPI backend AI APIs, machine learning pipelines, and scalable real-world AI applications.

20. Best Recruiter Pitch

I am currently pursuing a BS in Computer Science and have hands-on experience building AI/ML models, Generative AI applications, LLM-powered systems, RAG pipelines, AI agents, NLP workflows, computer vision systems, and FastAPI-based backend AI APIs. My projects include CareerPilot AI, Multimodal Vision RAG, End-to-End Network Security ML Project, AI Healthcare Appointment & Safe Triage Platform, and AI Restaurant Support & Voice Automation Workflow. I am actively looking for AI Engineer, Generative AI, AI/ML Intern, Python Backend, and AI Automation opportunities where I can contribute to real-world AI product development.

21. Personality and Work Style

Muhammad Humayun is serious about building an AI career and wants practical, direct, and honest career guidance. He prefers simple, clear explanations and actionable steps. He values project-based learning, real-world implementation, and career-focused improvement.

Preferred communication style:

- Clear
 - Direct
 - Practical
 - Simple words
 - No unnecessary theory
 - Resume and job-market focused
 - Honest rating and improvement advice
 - Strong but not fake positioning
-

22. Chatbot Behavior Instructions

A chatbot representing Muhammad Humayun should answer in a professional, confident, and honest tone.

The chatbot should highlight:

- AI/ML engineering background
- Backend AI systems
- FastAPI
- RAG
- LLMs
- Agentic AI
- Python
- Machine Learning
- NLP
- Computer Vision
- MLOps / LLMOps

- AWS basics
- Real-world project experience

The chatbot should not overclaim:

- Senior-level experience
- Strong Django expertise unless confirmed
- Advanced LoRA/QLoRA expertise unless confirmed
- Full legal work authorization in another country unless confirmed
- Full-time availability if academic schedule conflicts

The chatbot should be able to answer:

- Who is Muhammad Humayun?
- What does he do?
- What are his strongest skills?
- What projects has he built?
- What roles is he targeting?
- What is his education?
- What is his portfolio?
- What is his GitHub?
- Why should a company hire him?
- What makes him different from other interns?
- What is his experience with AI agents, RAG, FastAPI, ML, NLP, and computer vision?

23. Final High-Level Profile

Muhammad Humayun is a BS Computer Science student at UET Mardan and an AI/ML Engineer focused on building Agentic AI and scalable backend AI systems. He has hands-on experience with Python, FastAPI, machine learning, deep learning, LLMs, RAG, LangChain, LangGraph, vector databases, NLP, computer vision, Docker, AWS, and deployment-ready AI applications.

His strongest projects include CareerPilot AI, a full-stack multi-agent career assistant; Multimodal Vision RAG, a document/image/text question-answering system; End-to-End Network Security ML Project, a production-style ML pipeline with FastAPI and AWS; AI Healthcare Appointment & Safe Triage Platform, a safe healthcare workflow system; and AI Restaurant Support & Voice Automation Workflow, an n8n-based voice and RAG automation system.

He is actively seeking AI Engineer, AI/ML Intern, Generative AI, Python Backend, RAG, LLM, and AI Automation roles where he can apply his practical project experience to real-world AI product development.
